- Automatic saving of video alarm images on programmable routine
- Scheduled automatic cancellation of video files
- Languages available: ITALIAN/ENGLISH/FRANCAIS/GERMAN
- Automatic software update

MANAGER INTERFACE

- Software set up menu
- List of systems that have generated a video alarm
- Real time visualization of the systems in alarm
- Filtered selection by event date
- Visualization of the historical archive of stored videos

USER LICENSE

- The use of the software is by subscription
For info and costs, contact AVS ELECTRONICS

SOFTWARE FEATURES

- 1) When the AVS control panel sends a "video alarm" to the monitoring station, a pop up is activated on the desk with the system account preview of the complete event, customer data, date-time event.
- 2) If necessary, the operator can view the list of all systems with video alarms received through the management console. It is also possible to search for a specific event in the archive of the video alarms received, thanks to an intuitive search time filter.

MY AVS VIGILANT is also available in the "SERVER" version:

MY AVS VIGILANT SERVER allows installation on a dedicated server. This installation method allows the monitoring station for an independent development and integration of the visualization of video alarms stored on the MYAVSALARM Cloud in your CMS (Central Monitoring Station) system.
